At the end of the day, when I come home from a shift, I wanted to do more for the people who are suffering from chronic diseases. I know I need to focus on prevention.

PhD. GRADUATES WHO ILLUSTRATE OUR VISION AND ADVANCE OUR MISSION:

"The interprofessional nature of the School of Nursing allowed me to pursue so many passions in terms of a career. Because of mentorship, guidance, and encouragement, I am embarking upon a future I would never have imagined prior to my doctorate work."
Health care evolves daily and will ultimately become a system that looks nothing like it does today. Right now, one of the most pressing and most vital challenges is that health care leaders must be able to appreciate growth exponentially, gather accurate information, work across disciplines and develop solutions that improve the care for all.

Established in 1969 with a $10 million grant from the Gordon and Betty Moore Foundation, the School of Nursing has grown into a leader in the generation of health leaders. While our mission remains constant, our impact has broadened to include the issues surrounding health care reform, health disparities, the health care workforce, and population health. These are all issues that the school is uniquely positioned to address.

In the fall of that year, Betty Moore was thrilled to find someone who shared her vision. She wanted a school of nursing that could become a real force for change, a place where students could come to learn the issues surrounding health care reform, health disparities, the health care workforce, and population health. These are all issues that the school is uniquely positioned to address.

For all of my colleagues, it’s been an absolute delight to work with Betty Moore. It’s been a privilege to work with a woman who has such a keen understanding of the issues surrounding health care reform, health disparities, the health care workforce, and population health. She has been an inspiration and a leader in the field of nursing.

Dr. Priebe
Professor of Nursing
"We must..."}

In a recent article in the Journal of Nursing Administration, Dr. Priebe shared his thoughts on the critical role of the nurse in population health. He noted that nurses are uniquely positioned to have a significant impact on improving health outcomes and reducing health disparities. He emphasized the need for nurses to work collaboratively with other members of the health care team to ensure that patients receive the best possible care.

Dr. Priebe is an associate professor in the School of Nursing at UC Berkeley. His research focuses on the development of innovative models of care and the integration of technology into nursing practice. He is a strong advocate for improving access to health care and reducing health disparities.

"Our chronic care condition is worsening every year and with an aging population that will only get worse. We need new tools to help people manage their chronic illnesses.

Dr. Priebe adds, ""Nurses are in the unique position to leverage technology to improve patient outcomes. It’s essential that we continue to invest in these tools and ensure that they are accessible and effective.""
